

# INCIDENT REPORT

## Security Operations Center (SOC L1)

**Incident ID:** IR-20260301-WEB-BHNameSSD-Automated-Scan-Low

**Date:** 01 March 2026

**Severity:** High

**Status:** Monitoring

**Analyst:** SOC L1 Analyst

## Executive Summary

On March 1st, 2026, multiple HTTP 404 responses were detected on web server WEB-BHNameSSD originating from various external IP addresses. The activity consisted of automated reconnaissance and vulnerability scanning attempts targeting known web application vulnerability including:

- + DNS over HTTPS endpoints
- + PHPUnit RCE (eval-stdin.php)
- + ThinkPHP RCE
- + Docker Remote API exposure
- + Scan file
- + Microsoft Exchange exploit paths

All requests resulted in HTTP 404 responses, indicating that the targeted resources were not present on the server.

No successful exploitation was observed.

## Incident Details

| Source IP      | Source country       | ASN    | HTTP method | HTTP status | Affected server |
|----------------|----------------------|--------|-------------|-------------|-----------------|
| 47.91.125.252  | United Arab Emirates | 45102  | GET         | 404         | WEB-BHNameSSD   |
| 101.36.123.102 | Hong Kong            | 135377 | GET         | 404         | WEB-BHNameSSD   |
| 206.168.34.124 | United States        | 398324 | GET         | 404         | WEB-BHNameSSD   |
| 185.12.59.118  | Norway               | 50304  | GET         | 404         | WEB-BHNameSSD   |
| 176.65.149.253 | Netherlands          | 51396  | GET         | 404         | WEB-BHNameSSD   |
| 95.215.0.144   | Russia               | 44050  | GET         | 404         | WEB-BHNameSSD   |

|               |               |        |     |     |               |
|---------------|---------------|--------|-----|-----|---------------|
| 89.42.231.241 | Netherlands   | 206264 | GET | 404 | WEB-BHNameSSD |
| 81.29.142.100 | Russia        | 210259 | GET | 404 | WEB-BHNameSSD |
| 64.62.197.77  | United States | 6939   | GET | 404 | WEB-BHNameSSD |
| 46.19.137.194 | Switzerland   | 51852  | GET | 404 | WEB-BHNameSSD |
| 20.169.85.114 | United States | 8075   | GET | 404 | WEB-BHNameSSD |
| 5.101.64.6    | Russia        | 34665  | GET | 404 | WEB-BHNameSSD |

## Observed Activity

The following requests were observed:

/resolve?name=1.odns.m.dnsmeasure.top&type=A

/resolve?dns=UPIBAAABAAAAAAAAAATEEb2RucwFtCmRuc21IYXN1cmUDdG9wAAABAAE

/resolve?dns=oaMBAAABAAAAAAAAAATEEb2RucwFtCmRuc21IYXN1cmUDdG9wAAABAAE

/query?dns=3L4BAAABAAAAAAAAAATEEb2RucwFtCmRuc21IYXN1cmUDdG9wAAABAAE

/query?dns=ai0BAAABAAAAAAAAAATEEb2RucwFtCmRuc21IYXN1cmUDdG9wAAABAAE

/dns-query?name=1.odns.m.dnsmeasure.top&type=A

/dns-query?dns=z20BAAABAAAAAAAAAATEEb2RucwFtCmRuc21IYXN1cmUDdG9wAAABAAE

Events were observed from IP 47.91.125.252.

The event was observed from IP 20.169.85.114.

/aab9

/aaa9

The event was observed from IP 5.101.64.6.

## Initial Analysis

The traffic pattern matches automated bot scanning behavior commonly observed on internet-facing web servers.

Characteristics:

Sequential probing of known vulnerable paths

Multiple framework fingerprinting attempts

No session persistence

No privilege escalation attempt

No abnormal server response codes

The activity is consistent with opportunistic scanning rather than targeted attack.

## Impact Assessment

No exploitation succeeded

No data exposure detected

No service disruption observed

Risk Level: Low

## Actions Taken

### Threat Intelligence Verification

Source IP addresses were verified using AbuseIPDB:

| IP Address     | Abuse Score | ASN                      |
|----------------|-------------|--------------------------|
| 47.91.125.252  | 100%        | <a href="#">AS45102</a>  |
| 101.36.123.102 | 100%        | <a href="#">AS135377</a> |
| 206.168.34.124 | 100%        | <a href="#">AS398324</a> |
| 185.12.59.118  | 100%        | <a href="#">AS50304</a>  |
| 176.65.149.253 | 100%        | <a href="#">AS51396</a>  |
| 95.215.0.144   | 100%        | <a href="#">AS44050</a>  |
| 89.42.231.241  | 100%        | <a href="#">AS206264</a> |
| 81.29.142.100  | 100%        | <a href="#">AS210259</a> |
| 64.62.197.77   | 100%        | <a href="#">AS210259</a> |
| 46.19.137.194  | 100%        | <a href="#">AS51852</a>  |
| 20.169.85.114  | 100%        | <a href="#">AS8075</a>   |
| 5.101.64.6     | 100%        | <a href="#">AS8075</a>   |

## Containment Measures

Malicious IP addresses were added to the firewall block list.

## Conclusion

The investigation determined that the observed activity was part of widespread automated internet vulnerability scanning targeting publicly exposed web services.

Multiple external IP addresses attempted to access known vulnerable paths associated with common web frameworks and services, including PHPUnit, ThinkPHP, Docker API, DNS over HTTPS endpoints, and Microsoft Exchange components.

All requests resulted in HTTP 404 responses, confirming that the targeted resources were not present on the server. No evidence of successful exploitation, unauthorized access, data exposure, or service disruption was identified during the analysis.

The activity is assessed as opportunistic reconnaissance rather than a targeted attack against the organization.

The incident is therefore classified as Low Severity – No Impact, and no further remediation actions are required beyond continued monitoring and routine hardening measures.
