

1. Phân tích sơ bộ từ dashboard

Thông tin tổng quan:

- Tổng số log thất bại đăng nhập: 7,971 sự kiện (Event ID 4625).
- User bị tấn công: **Administrator** (100%).
- Quốc gia nguồn tấn công: Việt Nam (100%) — tuy nhiên cần lưu ý IP có thể là proxy hoặc VPN nội địa.
- Top 5 địa chỉ IP nguồn:

SRC_IP	Số lần đăng nhập thất bại
160.25.77.243	2,595
222.252.99.27	2,369
103.232.53.145	2,232
103.85.246.238	451
103.85.247.55	324

- + Biểu đồ theo thời gian cho thấy các lần đăng nhập thất bại tăng đột biến từ khoảng 10:00–12:00 và duy trì cao đến 18:00 → có thể là tấn công brute-force kéo dài.

2. Nhận định ban đầu

- + Đây là hành vi brute-force (thử mật khẩu liên tục) vào tài khoản quản trị.
- + Mức độ nghiêm trọng: Cao (vì tấn công vào **Administrator** có quyền cao nhất).
- + Nguồn tấn công đều từ nhiều IP cùng quốc gia → khả năng là botnet hoặc máy bị lợi dụng trong cùng khu vực mạng.

3. Đề xuất hướng xử lý chi tiết

A. Ngăn chặn và giảm thiểu

- + Chặn IP nguồn tấn công: Tạm thời block top 5 IP (và các IP tương tự) trong pfSense hoặc Windows
- + Bật giới hạn đăng nhập thất bại (Account Lockout Policy):
Vào **Local Security Policy** → **Account Lockout Policy**
Đặt: Lockout threshold: 5 lần, Lockout duration: 30 phút, Reset counter after: 30 phút
- + Đổi mật khẩu mạnh cho tài khoản Administrator, hoặc:
 - Vô hiệu hóa tài khoản mặc định **Administrator**.
 - Tạo tài khoản admin mới với tên khác (ẩn danh).
- + Bật tường lửa chặn RDP từ Internet (chỉ cho phép IP nội bộ hoặc VPN):
 - Nếu đang mở port 3389, cần giới hạn IP hoặc dùng RDP Gateway.

B. Giám sát và cảnh báo

Tạo cảnh báo trong ELK/Kibana:

- Rule: Nếu Event ID 4625 > 20 lần từ cùng một IP trong 10 phút → gửi cảnh báo (email hoặc Telegram).
- Nếu tài khoản **Administrator** bị brute-force nhiều lần → ưu tiên cảnh báo mức *critical*.

Ghi nhận hành vi và thời gian tấn công:

- Lưu log đầy đủ trong **Elasticsearch** để phân tích lặp lại.
- Xác định pattern thời gian (ví dụ: giờ hành chính → có thể là insider).

C. Phân tích sâu thêm (nâng cao)

Kiểm tra Event ID 4624 (Successful Logon)

Xem liệu có IP nào trong danh sách tấn công đăng nhập thành công không.

Nếu có → khẩn trương cô lập máy chủ và đổi toàn bộ mật khẩu.

So khớp hành vi với IDS/IPS hoặc firewall logs (pfSense):

- **Xác định xem các IP này có gửi nhiều traffic khác (HTTP, SMB, SSH...) hay chỉ brute-force.**

Đưa IP vào danh sách threat intel (OSINT):

- **Kiểm tra trên abuseipdb.com**

D. Đề xuất phòng thủ lâu dài

Triển khai Fail2Ban hoặc tương đương trên Windows (có thể dùng script tự động chặn IP khi login fail nhiều).

Kích hoạt MFA (multi-factor authentication) cho quản trị viên.

Giới hạn quyền truy cập **Administrator** qua RDP/VPN nội bộ.

Đặt cảnh báo tự động gửi qua Elastic Watcher hoặc ELK Alerting (Kibana Alerting).
